Does this website comply with accessibility standards?

The website www.GetAMoveOn.ac.uk complies with the following points on the WCAG 2.1 checklist checklist or they are not applicable:

Perceivable

Is the content fully usable when text is enlarged up to 200%?	Yes
Can users flip the content horizontally and vertically?	Yes
Is all content structure that is communicated visually available to assistive technologies?	Yes, mostly. Alt text of images might be missing
Have you avoided using images of text?	Yes, mostly. Where logos appear they may be images of text.
Does video that includes important visual information have an audio description?	Yes.
If styling is removed is the content in a logical order?	Yes.
Have you avoided using visual characteristics to communicate information?	Yes.
Have you avoided using colour as the only way to convey some information?	Yes.
Do all videos have captions that are synchronised with the audio?	Yes. All videos are hosted on YouTube and have YouTube captioning turned on.
Is essential audio information available as text?	Not applicable.
Can users stop audio that auto plays?	Not applicable. Audio does not autoplay.
Is essential visual information also available as text?	Not applicable. Visuals are not used to convey essential information.
Do all audio files have a transcript?	Not applicable. There are no audio files.

Operable

Can any content that moves or auto updates be stopped?	Not applicable.
Do pages that have time limits include mechanisms for adjusting those limits?	Not applicable. There are no time limits on pages.
Can all menus, links, buttons, and other controls be operated by keyboard?	Yes
When using a keyboard to move through a page does the order make sense?	Yes
When using a keyboard to move through a page can you tell where you are?	Yes
Are headings and labels clear and descriptive?	Yes, headings are.

Does each page have a unique title that indicates its purpose and context?	Yes, mostly. Where this is not the case there is a descriptive subtitle.
Does the website have two or more ways of finding content, such as a navigation menu, search feature, or site map?	Yes: search and navigation
Have you avoided using content that flashes or flickers?	Yes.
Is the purpose of every link clear from its link text?	Yes. We have avoided saying, 'click here' and have tried to use descriptive links.

Understandable

Have you avoided links, controls, or form fields that automatically trigger a change in context?	Yes
Does the website include consistent navigation?	Yes
Are features with the same functionality labelled consistently?	Yes
Do forms provide helpful, understandable error and verification messages?	Not applicable.

Robust

Are status messages and updates given appropriate roles that can be understood by AT, without receiving focus?	Not applicable.
Do all interactive components have an accessible name and role, and when required state? Has the correct ARIA markup been used and does it validate?	Yes, partly compliant.
Is the web page coded using valid HTML?	Yes

The website either does not comply with the following points on the WCAG 2.1 checklist, or we don't know whether it complies:

Perceivable

Do all important graphical objects, interface components, and states have a colour contrast of 3:1?	Don't know
Can line height, spacing between paragraphs and letter and word spacing be changed without breaking anything?	Don't know.
Does all text have sufficient contrast against the background colour?	Don't know. Checklist does not state what "sufficient contrast" is.
Do all images have an appropriate text equivalent?	No.
Have you added HTML autocomplete tokens to any forms collecting information about the user?	No. Autocomplete is turned off for the only user input (search field), to aid privacy

	so we do not accidentally collect auto completed search terms
Does the page content resize to a single column with no horizontal and vertical scrolling?	No. The content resizes and one can use vertical scrolling to scroll through the content. No horizontal scrolling needed.
Where extra content is shown or hidden on focus, can it be dismissed, interacted with (and not disappear when the user moves to it) and will stay visible until dismissed by the user?	Not applicable.

Operable

Can blocks of links and other interactive elements be bypassed by keyboard users?	Don't know
On forms and other components is the accessible name or label the same as any on-screen text?	Don't know
Do you have shortcuts triggered by only one letter or character? If so can they be turned off or remapped by the user?	No
Does some of your site functionality work using a single point (e.g. fingertip)? If so, have you ensured it doesn't get triggered the moment it is touched?	No
Does your site respond to motion or movement? If so, can responding to motion or movement be disabled, and your site still be fully usable?	No
Does some of your site functionality need several fingers or complex gestures to operate it? If so, can the same functionality be used with just single taps or clicks?	No.

Understandable

Has the language of the web page or document (or individual parts of a multilingual document) been defined?	No
